S13 – HEALTH & PHARMACEUTICAL INDUSTRY

Procurement of 300 Ambulances

Sponsored by **Ministry of Health and Public Hygiene**
General Secretariat, Directorate of Studies and Planning

ESTIMATED PROJECT COST	LOCATION	FINANCING SOUGHT
EUR 25.15 million	**All eight regions of Niger**	**Development partners**

All monetary figures are in EUR. Converted estimates are indicative and rounded; source estimates may use different valuation bases.

Investment opportunity

Niger is a landlocked West African country covering 1,266,491 km² and characterized by high population growth.

The population is very young, with 49.6% under age 15, and predominantly rural, at 84%.

Health coverage stood at 57.39% in the first half of 2026. Although Niger's maternal mortality declined steadily between 1992 and 2023, from 652 to 350 deaths per 100,000 live births (WUENIC), it remains high and threatens achievement of the SDG target of 70 per 100,000 live births. In addition to expanding health coverage through the construction of integrated health centers (CSI) and district hospitals (HD), this requires stronger referral and counter-referral systems and an ambulance network to shorten transport times and improve emergency care.

The project to procure 300 ambulances will be implemented in health districts across all regions concerned. It aims to help reduce maternal, neonatal, and child morbidity and mortality and combat infectious diseases in support of the SDGs.

AT A GLANCE

PROJECT SPONSOR	Ministry of Health and Public Hygiene
TARGET POPULATION	Niger's population
REFERENCE	F2IN catalog, project SA-006

Objectives

Reduce maternal, neonatal, and child mortality in Niger

- Provide emergency patient care by developing integrated mobile medical services supported by an operational, proactive center
- Provide emergency medical evacuations
- Reduce emergency transport times
- Expand access to emergency care

Components

1. Procurement of 300 ambulances
2. Development of integrated mobile medical services supported by an operational, proactive center

Expected outcomes

Outputs

- Emergency patient care is improved through integrated mobile medical services supported by a proactive operational center
- Health centers' logistical capacity is strengthened
- The referral/counter-referral system is operational

Outcomes

- Rescue and care for people in emergency situations are facilitated
- Emergency call handling and care are better coordinated

Impact

- Maternal, neonatal, and child mortality is reduced

Strategic alignment

The procurement of 300 ambulances supports the 2025–2029 Republic Refoundation Program, particularly its focus on accelerated social reforms. It is a foundational investment aimed at sustainably strengthening public health care provision, improving geographic and financial access to health services, reducing territorial disparities, and consolidating Niger's health sovereignty. Its programmatic approach is based on strengthening the health system hierarchy through primary and referral care infrastructure, prioritizing areas with the largest health coverage gaps.
