S13 – HEALTH & PHARMACEUTICAL INDUSTRY

Construction of 9 District Hospitals and Conversion of 251 Health Posts into Type II Integrated Health Centers

Sponsored by **Ministry of Health and Public Hygiene**
General Secretariat, Directorate of Studies and Planning

ESTIMATED PROJECT COST	LOCATION	FINANCING SOUGHT
EUR 196.17 million	**Niger's eight regions**	**Development partners**

All monetary figures are in EUR. Converted estimates are indicative and rounded; source estimates may use different valuation bases.

Investment opportunity

The health system is characterized by limited coverage, which impedes progress toward Universal Health Coverage (UHC) and overall health system performance. Expanding health coverage is a priority of the 2022–2026 Health and Social Development Plan (PDSS), which targets an increase from 53.2% in 2021 to 63.56% in 2026. Construction and commissioning of new integrated health centers are essential to address this challenge.

The Quality Health Infrastructure Strengthening Support Program in Niger therefore aims to construct 9 district hospitals and 251 integrated health centers.

Through their various services, district hospitals are also pillars of quality emergency obstetric care and contribute to reducing maternal and neonatal mortality, a major national public health issue.

Converting 251 health posts into integrated health centers also supports the 2021–2030 National UHC Strategy. It aims to expand coverage in regions where it is very low and a substantial proportion of the population lives more than 5 km from a health facility. It also enables quality health services with an appropriate minimum package of activities.

AT A GLANCE

PROJECT SPONSOR	Ministry of Health and Public Hygiene
TARGET POPULATION	Niger's population
REFERENCE	F2IN catalog, project SA-005

Objectives

Improve quality health care provision in beneficiary regions and departments to accelerate progress toward UHC

- Convert and equip 251 health posts as Type II integrated health centers
- Build and equip 9 district hospitals

Components

1. Construction and equipment of 9 district hospitals
2. Conversion of 251 health posts into integrated health centers: construction of a maternity unit with accommodation, a preventive care unit, and nurses' housing
3. Equipment strengthening: provide each integrated health center with medical equipment, install solar lighting, and dig wells or drill boreholes for each center

Expected outcomes

Outputs

- 9 district hospitals are built and equipped
- 251 health posts are converted into Type II integrated health centers

Outcomes

- Access to care is improved

Impact

- Maternal and child mortality is reduced

Strategic alignment

Construction of 9 district hospitals, conversion of 251 health posts into integrated health centers, and provision of additional equipment for these centers supports the 2025–2029 Republic Refoundation Program, particularly its focus on accelerated social reforms. It is a foundational investment aimed at sustainably strengthening public health care provision, improving geographic and financial access to health services, reducing territorial disparities, and consolidating Niger's health sovereignty. Its programmatic approach is based on strengthening the health system hierarchy through primary and referral care infrastructure, prioritizing areas with the largest health coverage gaps.
