Improving the Quality of Emergency Care in Niger's Hospitals

Sponsored by **Ministry of Health and Public Hygiene**
General Secretariat, Directorate of Studies and Planning

ESTIMATED PROJECT COST	LOCATION	FINANCING SOUGHT
EUR 8.08 million	**All national hospitals**	**Development partners**

All monetary figures are in EUR. Converted estimates are indicative and rounded; source estimates may use different valuation bases.

Investment opportunity

Emergency service activity has increased steadily. Cramped premises and organizational shortcomings in emergency departments, as seen across Niger's hospitals, compound this pressure. Patients face excessive waiting times and professionals sometimes work in difficult reception and working conditions, causing operational problems and affecting service quality.

Emergency departments therefore require a fundamental redesign to introduce modern organizational approaches through the construction and equipment of hospital emergency departments. This is the purpose of the project.

AT A GLANCE

PROJECT SPONSOR	Ministry of Health and Public Hygiene
TARGET POPULATION	Niger's population
REFERENCE	Project sheet submitted by the sponsor

Objectives

Strengthen the quality of patient care in hospital emergency departments

- Strengthen technical capacity (infrastructure and equipment) in selected hospitals
- Introduce an architectural layout adapted to patients' cultural context (pediatric emergency units; separate male and female units in surgery and medicine; accessible facilities for persons with disabilities or reduced mobility)

Components

1. Studies
2. Infrastructure
3. Equipment

Expected outcomes

Outputs

- Technical capacity (infrastructure and equipment) in selected hospitals is strengthened

Outcomes

- Quality of emergency care is improved

Impact

- Emergency-related mortality is reduced

Strategic alignment

Improving emergency care quality in Niger's hospitals supports Pillar 4 of the 2025–2029 Republic Refoundation Program, which concerns accelerated social reforms and improved provision of quality health care and services. It represents a strategic investment to reduce preventable deaths, complications, and disabilities by improving organization, skills, technical capacity, protocols, and emergency referral and coordination systems. The project will strengthen hospital system resilience to individual and collective emergencies, epidemics, disasters, and mass casualty incidents. It will also strengthen human capital, improve quality and safety of care, and develop a national emergency care system based on standards, data, and continuous quality improvement mechanisms.
