S13 – HEALTH & PHARMACEUTICAL INDUSTRY

Strengthening Medical Imaging and Surgical Equipment Capacity in 32 Health Facilities

Sponsored by **Ministry of Health and Public Hygiene**
General Secretariat, Directorate of Studies and Planning

ESTIMATED PROJECT COST	LOCATION	FINANCING SOUGHT
EUR 6.27 million	**All regions of Niger**	**Development partners**

All monetary figures are in EUR. Converted estimates are indicative and rounded; source estimates may use different valuation bases.

Investment opportunity

Strengthening health infrastructure and equipment capacity is one of the main challenges identified in Niger's health system. Such capacity is essential to ensure quality care, improve emergency patient care, reduce infections, and improve access to health care and services for the entire population.

This project will strengthen medical imaging and surgical equipment capacity in 32 health facilities in Niger.

AT A GLANCE

PROJECT SPONSOR	Ministry of Health and Public Hygiene
TARGET POPULATION	Niger's population
REFERENCE	Project sheet submitted by the sponsor

Objectives

Help improve the quality of care provided to the population

- Equip 32 health facilities (2 referral hospitals, 3 national hospitals, 7 regional hospitals (CHR), 7 maternal and child health centers (CSME), 5 specialized referral centers, and 8 district hospitals (HD)) with medical imaging equipment
- Train users and maintenance technicians

Components

1. Procurement of medical imaging equipment
2. Procurement of surgical equipment

Expected outcomes

Outputs

- 32 health facilities are provided with medical imaging equipment

Outcomes

- Improved quality of care

Impact

- Improved population health

Strategic alignment

Strengthening medical imaging and surgical equipment capacity in 32 health facilities in Niger supports Pillar 4 of the 2025–2029 Republic Refoundation Program on accelerated social reforms, particularly access to health and hygiene services. This investment is intended to sustainably strengthen national laboratory diagnostic capacity, improve quality and safety of care, bring diagnostic services closer to communities, and consolidate national surveillance and response to diseases with epidemic potential. It also contributes to Niger's health sovereignty through the development of national infrastructure, equipment, skills, and systems needed to deliver a diagnostic package appropriate to each level of the health system. Implementation will reduce diagnostic delays, avoidable referrals, and geographic inequalities in diagnostic access, while improving the availability of reliable data for health decision-making.
